

The Royal College of
Chiropractors

Chiropractic Quality Standard

Supportive Self-Management in Chronic Care

About The Royal College of Chiropractors' Quality Standards

Quality Standards are tools designed to help deliver the best possible outcomes for patients. They are a series of specific, concise quality statements with associated measures that provide aspirational, but achievable, markers of high-quality patient care covering the treatment of different conditions. They also form an important part in addressing the increasing priority being placed on improving quality and patient outcomes.

The primary purpose of The Royal College of Chiropractors' quality standards is to make it clear what quality care is by providing patients, the public, healthcare professionals, commissioners and chiropractors with definitions of high-quality chiropractic care.

By providing a clear description of what a high-quality service looks like, clinics can improve quality and achieve excellence. The quality standards encompass statutory requirements, best practice and existing clinical guidelines, but they are not a new set of targets or mandatory indicators for performance management. They are, however, a useful source to form the basis of clinical audit and to identify priorities for future improvement.

Chiropractors are encouraged to adopt the Royal College of Chiropractors quality standards as practice policy. They can be used in a wide range of circumstances, such as a source of identifying CPD, promoting the services that you provide, tendering for NHS contracts, or education at a local and national level. They enable Healthcare professionals to understand the standard of service that you provide, and allow commissioners to be confident that the services they are purchasing are of high quality. Importantly, they also help patients to understand what service they should expect.

Quality Statements

1. Supportive self-management is offered to all patients with long-term chronic conditions, whether symptoms are continuous or recurring in nature.
2. Supportive self-management is only provided with the specific agreement of patients following an informed discussion about the nature of their chronic condition, the likely outcomes with and without ongoing care, and alternative management options.
3. Patients with chronic conditions undergoing supportive self-management are encouraged to discuss their health beliefs, concerns, personal goals, expectations and preferences to inform decisions made about their individualised care.
4. Patients with chronic conditions undergoing supportive self-management are actively involved in shared decision-making and supported to make fully informed choices about their treatment and care.
5. A chiropractic care plan is developed in partnership with patients undergoing supportive self-management that includes goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.
6. The aim of a care plan for patients on supportive self-management plans is to reduce the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.
7. Although the frequency of continued treatment depends upon the severity and duration of the symptoms, once stable, patients with chronic conditions undergoing supportive self-management should not expect treatment intervals to be less than four weeks.
8. Supportive self-management includes challenging patients' beliefs about their condition, encouraging a return to usual activity levels despite residual symptoms, self-monitoring and avoiding the over-reliance on active treatment.
9. The progress and needs of patients with chronic conditions undergoing supportive self-management will be regularly reviewed, including an assessment of activity levels, pain relief, anxiety, and whether goals are being met.
10. Patients with chronic conditions undergoing supportive self-management will be regularly assessed and considered for referral to another healthcare practitioner, either instead of, or in addition to chiropractic care.
11. Patients with chronic conditions undergoing supportive self-management will have formal documented reviews at least every twelve months.
12. Patients with chronic conditions undergoing supportive self-management will experience continuity of care, whenever possible, provided by the same chiropractor.
13. Patients with chronic conditions undergoing supportive self-management are made aware that they have the right to choose, accept or decline treatment at any time, and that these decisions are respected and supported.

Scope of Quality Standard

This quality standard covers chiropractic supportive self-management of patients with long-standing chronic musculoskeletal conditions (often referred to as “maintenance care”).

Long-standing chronic conditions vary significantly in their severity and frequency of symptoms. These quality statements are therefore general, but nevertheless provide aspirational, but achievable, markers of high-quality, cost-effective patient care.

Quality Measures

The quality measures accompanying each quality standard aim to improve the structure, process and outcomes of care. They are not a new set of targets or mandatory indicators for performance management, but might be used to form the basis of future audit. They also specify what each statement means to each stakeholder (provider, commissioners, patients).

Chiropractic Quality Statement I: Offering Care

<p>Quality Statement</p>	<p>Supportive self-management is offered to all patients with long-term chronic conditions, whether symptoms are continuous or recurring in nature.</p>
<p>Quality Measure</p>	<p>Structure: Evidence of practice policy regarding the provision of supportive self-management to patients with long-term chronic conditions.</p> <p>Process: Proportion of patients with long-term chronic conditions that are offered supportive self-management care.</p> <p>Numerator: the number of patients in the denominator who have been offered supportive self-management care.</p> <p>Denominator: the total number of patients with long-term chronic conditions.</p>
<p>Description of what the quality statement means for each audience</p>	<p>Service Providers should ensure that patients with long-term chronic conditions are offered supportive self-management care.</p> <p>Commissioners should expect that patients with long-term chronic conditions are offered supportive self-management care.</p> <p>Patients with long-term chronic conditions should expect to be offered supportive self-management care.</p>

Chiropractic Quality Statement 4: Shared Decision-Making

Quality Statement

Patients with chronic conditions undergoing supportive self-management are actively involved in shared decision-making and supported to make fully informed choices about their treatment and care.

Quality Measure

Structure: Evidence of practice policies relating to shared decision-making.

Process: Proportion of patients with chronic conditions undergoing supportive self-management who have been supported to make fully informed choices about their treatment and care, as well as actively involved in shared decision-making.

Numerator: the number of patients in the denominator who have been supported to make fully informed choices about their treatment and care, as well as actively involved in shared decision-making.

Denominator: the total number of patients with chronic conditions being provided with supportive self-management.

Description of what the quality statement means for each audience

Service Providers should ensure that patients with chronic conditions undergoing supportive self-management are supported to make fully informed choices about their treatment and care, and are actively involved in shared decision-making.

Commissioners should seek evidence that patients with chronic conditions undergoing supportive self-management are supported to make fully informed choices about their treatment and care, and are actively involved in shared decision-making.

Patients with chronic conditions undergoing supportive self-management should expect to be supported in make fully informed choices about their treatment and care, and actively involved in shared decision-making.

Chiropractic Quality Statement 5: Care Plan

Quality Statement

A chiropractic care plan is developed in partnership with patients undergoing supportive self-management that includes goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Quality Measure

Structure: Evidence of practice policies and procedures with regard to chiropractic care plans, with the inclusion of goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Process: Proportion of patients undergoing supportive self-management who have receive a plan of care, including goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Numerator: the number of patients in the denominator who have receive a plan of care, including goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Denominator: the total number of patients with chronic conditions being provided with supportive self-management.

Description of what the quality statement means for each audience

Service Providers should have the systems in place to ensure that patients undergoing supportive self-management receive a plan of care, including goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Commissioners should seek evidence that patients undergoing supportive self-management receive a plan of care, including goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Patients with chronic conditions undergoing supportive self-management should expect to be given a plan of care, including goal setting, problem solving, lifestyle management, condition-specific education and chiropractic treatment.

Chiropractic Quality Statement 6: Aims of Care

<p>Quality Statement</p>	<p>The aim of a care plan for patients on supportive self-management plans is to reduce the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.</p>
<p>Quality Measure</p>	<p>Structure: Evidence of policy statements detailing the aims of a care plan, specifically addressing the aim of reducing appointment frequency and encouraging more active self-monitoring and self-management.</p> <p>Process: Proportion of patients on supportive self-management plans in which the aim of the care plan is to reduce the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.</p> <p>Numerator: the number of patients in the denominator whose care plans include the aim of reducing the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.</p> <p>Denominator: the total number of patients with chronic conditions being provided with supportive self-management.</p>
<p>Description of what the quality statement means for each audience</p>	<p>Service Providers should ensure that the aim of a care plan for patients with chronic conditions on supportive self-management plans is to reduce the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.</p> <p>Commissioners should look for evidence that the aim of care plans for patients with chronic conditions on supportive self-management plans is to reduce the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.</p> <p>Patients with chronic conditions on supportive self-management plans should expect the aim of their care plan to be to reduce the frequency of appointments to a point where maximum therapeutic benefit continues to be achieved while encouraging more active self-monitoring and self-management.</p>

Chiropractic Quality Statement 8: Challenging Beliefs and Encouraging Activity

<p>Quality Statement</p>	<p>Supportive self-management includes challenging patients' beliefs about their condition, encouraging a return to usual activity levels despite residual symptoms, self-monitoring and avoiding the over-reliance on active treatment.</p>
<p>Quality Measure</p>	<p>Structure: Evidence of policy statements relating to the management of patients with chronic conditions undergoing supportive self-management with respect to challenging their beliefs about their condition, encouraging a return to usual activity levels, self-monitoring and avoiding the over-reliance on active treatment.</p> <p>Process: Proportion of patients with chronic conditions undergoing supportive self-management whose beliefs about their condition are challenged, and who are encouraged a return to usual activity levels, to self-monitor and to avoid the over-reliance on active treatment.</p> <p>Numerator: the number of patients in the denominator whose beliefs about their condition are challenged, and who are encouraged a return to usual activity levels, to self-monitor and to avoid the over-reliance on active treatment.</p> <p>Denominator: the total number of patients with chronic conditions being provided with supportive self-management.</p>
<p>Description of what the quality statement means for each audience</p>	<p>Service Providers should ensure that patients with chronic conditions undergoing supportive self-management are challenged about their beliefs about their condition, and that they are encouraged a return to usual activity levels, to self-monitor and to avoid the over-reliance on active treatment.</p> <p>Commissioners should seek evidence that patients with chronic conditions undergoing supportive self-management are challenged about their beliefs about their condition, and that they are encouraged a return to usual activity levels, to self-monitor and to avoid the over-reliance on active treatment.</p> <p>Patients with chronic conditions undergoing supportive self-management should expect their beliefs about their condition to be challenged, to be encouraged to return to usual activity levels, to self-monitor and to avoid the over-reliance on active treatment.</p>
