

CHIROPRACTOR REQUIRED FOR SCOTTISH HIGHLAND PRACTICE.

Set in central Inverness this semi-rural location this is a very busy well established multidisciplinary clinic. The clinic is run by Eugene and Valerie Pearce. Eugene and Valerie both graduated from AECC in 1993. and have worked in the Scottish Highlands since graduation building the Highland Chiropractic Clinic from the old Central Inverness Dairy built in 1901.

They opened their Satellite Clinic in Dornoch 10 years ago which is located in the old Railway Station.

Both clinics have been kept very evidence focussed. We have access the NHS Highland PACS's service (Hospital X-rays MRI's CT's and specialist imaging). We have onsite X-ray and DEXA scanning facilities. We also have a range of modalities including Shockwave. For those specifically interested in rehab we also have a full Primal Fitness free weight rack.

Eugene has a special interest in lower limb and gait related injuries, the use of custom Orthotics, AFO's for patients with complex gait issues of profound neurological deficits. He has recently trained in the fitment of the Turbomed AFO and the Ritchie Brace. Patients with full flaccid foot drop and severe Charcot Marie Tooth are back long-distance running. Valerie has an interest in the treatment of the pregnant patient and children, in particular children with profound neurological and developmental disorders. Henry or other Chiropractor is more rehab focussed and enjoys treating the sportsmen, strongmen and athletes. Also at the clinic, we have a Physiotherapist Barbara, Chiropodist Lilian, and Ashley our Sports and remedial massage therapist.

Clinic is extremely busy with high numbers of new patients. This keeps life interesting and your diagnostic skills are kept sharp, pathology and fractures are a very regular occurrence. (Many of our more interesting Radiology cases we have shared with Inger Roug at AECC and Alf Turner at WIOC so its possible you have seen one or two in lectures already).

PRT Training available for new graduates. Covid Protocols in place. Applicant must be proficient in Diversified, and evidence orientated, and patient centred.

If this is something that would interest you see our website for more info:
